

ggplot을 이용한 그림그리기

1. 선 그래프

2. 히스토그램

3. 산포도

4. 상자그래프

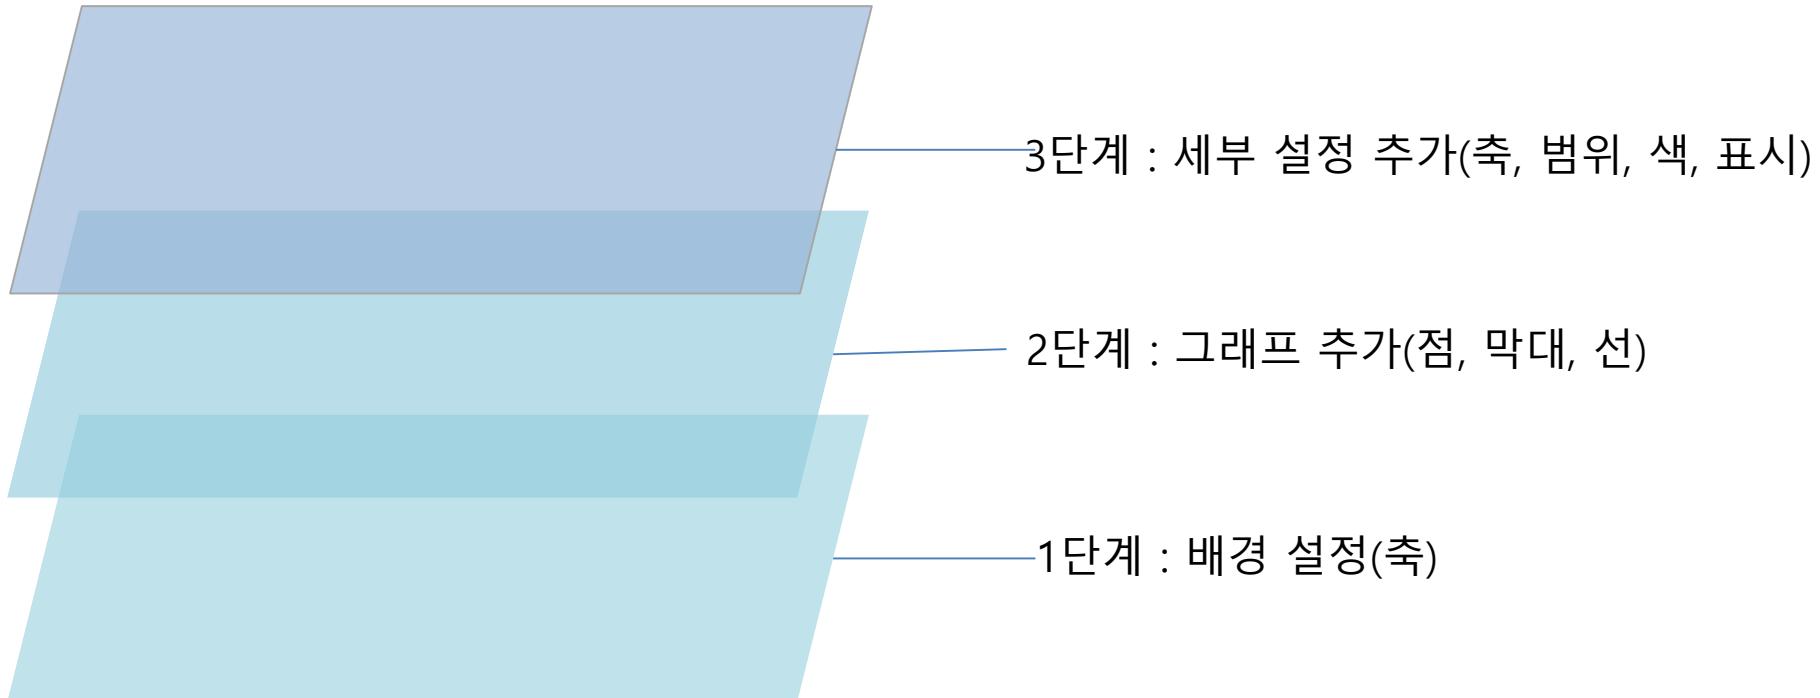

5. 원그래프

6. 막대그래프-1

7. 막대그래프-2

ggplot2를 이용한 그림그리기

0. ggplot2 레이어 구조

- ggplot2는 데이터를 시각화하는 패키지로 보통 3단계로 구성되어 있음
 - 1단계 : 배경 설정으로 데이터 축을 설정
 - 2단계 : 그래프 추가(점, 막대, 선 등)
 - 3단계 : 세부 설정 추가(축 범위, 색, 표식 등)
- ggplot2의 함수 구조의 예를 들면 다음과 같음

```
ggplot(data=data1, aes(x=var1, y=var2))+geom_point()+xlim(3,6)
```

(1단계)

(2단계)

(3단계)

- 1단계에서 data는 사용할 데이터, aes의 괄호 안은 x축 변수, y축 변수
- 2단계는 그래프의 종류를 나타내는데 주로 사용하는 종류는 다음과 같음

geom_point() : 산포도

geom_smooth() : 평활그래프

geom_bar() : 막대그래프(빈도 막대그래프로 X축만 설정)

geom_col() : 막대그래프(집단간 차이를 나타냄)

geom_boxplot() : 상자그래프

geom_histogram() : 히스토그램

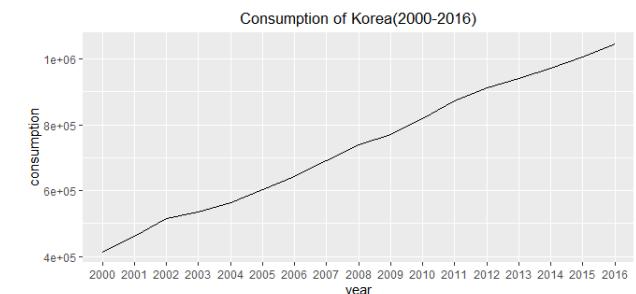

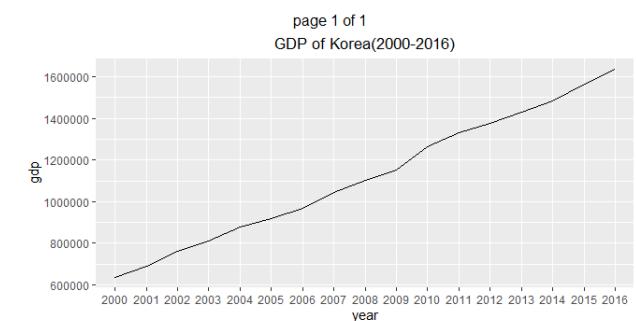

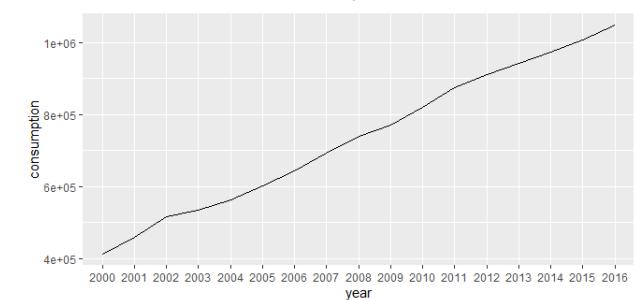

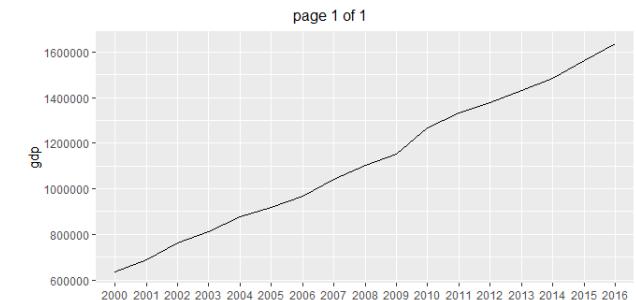

geom_line() : 선그래프

- 3단계에서 xlim의 괄호 안은 x축에 그릴 데이터의 범위를 나타냄

1. 선 그래프

b1-ch3-1-ggplot.R

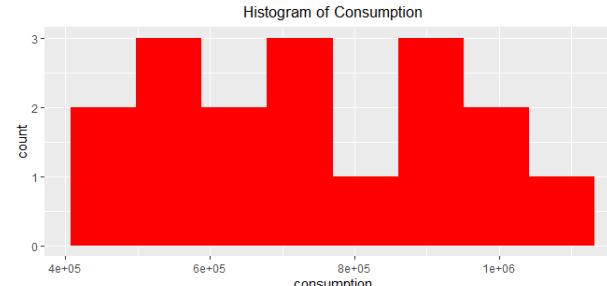

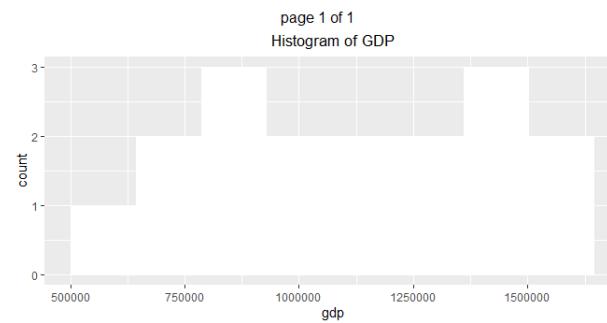

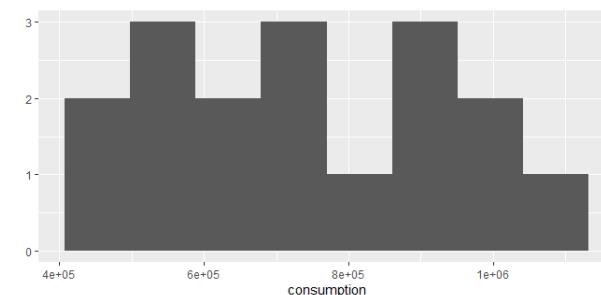

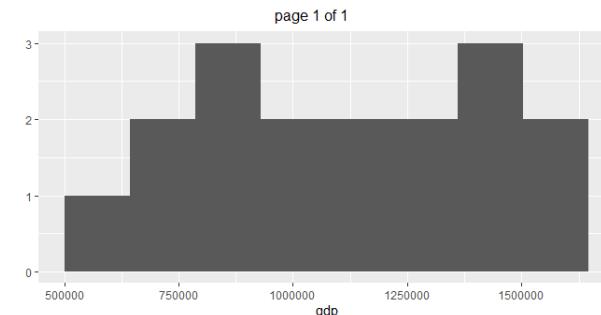

```
library(openxlsx)
library(ggplot2)
library(gridExtra)
sample1<-read.xlsx("http://kanggc.ptime.org/book/data/sample1-
n.xlsx")
year<-sample1$year
